Развитие абстрагирования у младших школьников

Сложность проблемы объясняется тем, что мышление имеет множество аспектов изучения, множество сторон, связей и особенностей. Одним из аспектов изучения проблемы мышления, которому уделяли большое внимание психологи разных стран - было исследование отдельных мыслительных процессов или операций. К ним относятся такие, как сравнение, классификация, обобщение, абстрагирование. Актуальность изучения этой операционной стороны общего процесса мышления не уменьшалась при изучении мышления как целостного познавательного процесса, которое характерно для работ последних лет. Ведь познание целого требует и изучения его частей и сторон.
